assignment01

Welcome to cosc 111 and this is your first assignment submission! In this assignment, our goal is to know how to upload your files to your GitHub assignment repository. Your GitHub assignment01 repository should be named as "**assignment01-*your_github_username***". If you don't know where is your assignment repository, you can go to our class GitHub website: https://github.com/cosc111-2019winter to look for your repositories. You can only see public repositories, like "**assignments**" and your own repositories.
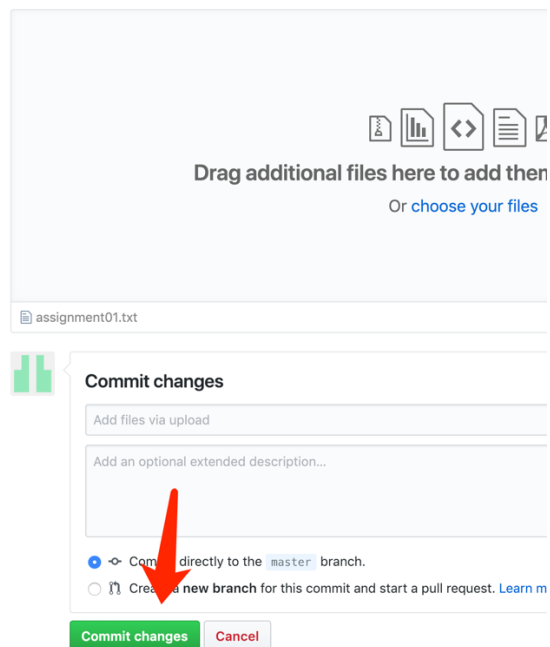

Once you find and open your assignment01 repository, you can upload a file to the repository, by clicking "Upload files" in the webpage.

Now let's prepare a text file to upload for your first assignment. On Mac, open TextEdit to create a text file. If you don't know how to create a text file, follow the guide in the next page.

In the text file, write your name, your email address, your EID, and your github username. Save the file with the name: assignment01.txt

Upload the text file to your GitHub webpage by dragging the file to the webpage or click "choose your files."

Finally, the **most important step is to click the green "Commit changes"** so that the file is really uploaded to your repository.

Always check your repository webpage after you submit the file to see if the file is really there.

Once your file is uploaded to the repository, you can click the file link to see the content of the file.

Guide for creating a text file on Mac

1. Open TextEdit using Spotlight
   Launch Spotlight by pressing keys: Command + Space (⌘ + Space) at the same time
   You will see a Spotlight Search box like the following image.

   In Spotlight search box, enter: `textedit`
   You will see TextEdit.app in the TOP HIT list, something like the following image:

   Press Enter or click the "TextEdit.app" in the TOP HIT list.

2. Check the preference of TextEdit
   Now TextEdit is opened, we need to first check the preferences of the TextEdit. Click "TextEdit" in the top-left corner of the entire screen, and then click "Preferences..." A
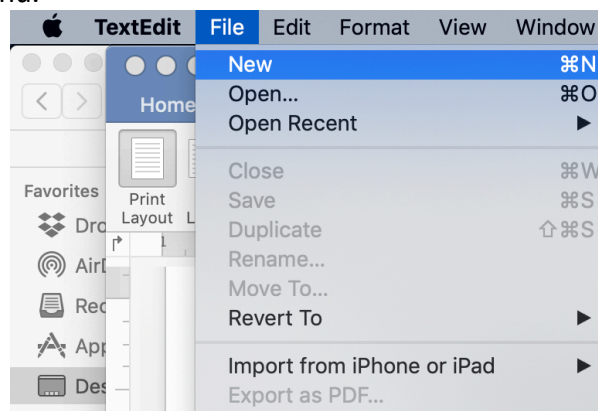

new window of Preferences will show up, like the following image. You don't need to have the exact selections as the selections in the image.

But, check if the Format is Rich text or Plain text. We need to select **Plain text** in the preferences.

3. Create a new file
   To create a new file, click "File" in the top-left corner of the full screen, and then click "New" in the menu.

Then, an untitled file is opened and you can write anything in it.

4. Save a new file
    To save the file, again, click the "File" in the top-left corner of the full screen, then click "Save…"
    A new window will show up for you to save a file. Change the name of the file as you need. And remember the location (`Where`) you save the file.
    Click "Save" button in the window to save the file.

5. Now, if you save the file in Documents, you can find the file in the documents folder in your home directory.
